DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the specification

Page 1, line 9, after "2003", - - now U.S Pat. No. 6,778,309, - - has been inserted.

RELATED APPLICATIONS

This application is a continuation – in part of U.S. Patent Application "METHOD AND SYSTEM FOR REFORMING SWEEPED-WAVELENGTH MEASUREMENTS WITHIN AN OPTICAL SYSTEM", Ser. No. 10/403, 238, filed on March 28, 2003, now U.S. Pat. No. 6,778,307, the specification of which is incorporated herein by reference.

Oath/Declaration

2. Oath and declaration filed on 1/2/2004 is accepted.

Information Disclosure Statement

3. The prior art documents submitted by applicant in the Information Disclosure Statement filed on 1/26/2004 have all been considered and made of record (note the attached copy of form PTO – 1449).

Allowable Subject Matter

4. Claims 1 – 22 are allowed.

5. The following is an examiner's statement of reasons for allowance: The prior art taken either singularly or in a combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims 1 and 14, for example which include an optical system having an optical illumination subsystem for producing an optical beam having a swept wavelength, an optical coupler, a measurement resonator coupled to one output of an optical coupler and a reference resonator coupled to another output of an optical coupler and a measurement detector coupled to a measurement resonator for measuring a measurement intensity of light and one reference detector coupled to a reference resonator for measuring a reference intensity of light and a processing subsystem coupled to an output of a measurement detector and an output of at least

one optical detector for interpreting variations in measured intensity in conformity with variations in reference intensity.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The closest prior art

Fritz et al (5,345,328) discloses, a tandem resonator reflectance modulator.

McBrien (4,738,527) discloses, an apparatus and method for determining position with light.

Watterson et al (6,594,022 B1) discloses, a wavelength reference device.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
